## Week 1 Day 1

## Add whole numbers: Mental \& Written strategies

Each day covers one maths topic. It should take you about 1 hour or just a little more.

1. Start by reading through the Learning Reminders. They come from our PowerPoint slides.

2. Tackle the questions on the Practice Sheet.

There might be a choice of either Mild (easier) or Hot (harder)!
Check the answers.

3. Finding it tricky? That's OK... have a go with a grown-up at A Bit Stuck?

4. Have I mastered the topic? A few questions to Check your understanding.
Fold the page to hide the answers!

## Learning Reminders

## Add whole numbers: Mental \& Written strategies.

| Number | 1000 more |
| :---: | :---: |
| 46 | 1046 |
| 2279 | 3279 |
| 53,837 | 54,837 |
|  | 1256 |
| 120,348 |  |
|  | 24,873 |

What are the missing numbers?

## Learning Reminders

Add whole numbers: Mental \& Written strategies.

## Learning Reminders

Add whole numbers: Mental \& Written strategies.

## Learning Reminders

Revise column addition of 4-digit and 5-digit numbers.

$$
4267+2784+3832
$$

| 4267 |  |
| :---: | :---: |
| Remember to leave a blank | 4784 <br> row above the answer line. |
|  | $\mathbf{3 8 3 2}$ |
|  | 111 |

Add the 1 s , then the 10 s , then the 100 s, then the 1000 s.

## Practice Sheet Mild

## Adding 3-digit and 4-digit numbers

$$
\begin{array}{llll}
\text { 1. } & 3575+2718 & \text { 5. } & 4578+234 \\
\text { 2. } & 5671+1482 & \text { 6. } & 8482+573 \\
\text { 3. } & 4289+245 & \text { 7. } & 7458+634 \\
\text { 4. } & 6582+1998 & \text { 8. } & 5678+3781
\end{array}
$$

## Challenge

Write two additions with answers between 5000 and 10,000 where there are no $2 s$ or $3 s$ in any of the numbers.

## Practice Sheet Hot

## Adding 4-digit and 5-digit numbers

1. 

$63,789+24,845$
6. $45,782+2845$
2. $\quad 27,045+16,839$
7. $28,341+5294$
3. $34,578+26,284$
8. $34,784+3997$
4. $\quad 74,286+52,153$
9. $72,458+8725$
5. $\quad 58,482+34,619$
10. $56,794+7537$

## Challenge

Write two additions with answers between 20,000 and 30,000 where there are no zeros or fives in any of the numbers!

## Practice Sheets Answers

Adding 3-digit and 4-digit numbers (mild)

1. $3575+2718=6293$
2. $5671+1482=7153$
3. $4289+245=4534$
4. $6582+1998=8580$ quicker to work out mentally
5. $4578+234=4812$
6. $8482+573=9055$
7. $7458+634=8092$
8. $5678+3781=9459$

## Challenge

Write two additions with answers between 5000 and 10,000 where there are no 2 s or 3 s in any of the numbers.
e.g. $4061+4694=8755$

## Adding 4-digit and 5-digit numbers (hot)

1. $\quad 63,789+24,845=88,634$
2. $27,045+16,839=43,884$
3. $34,578+26,284=60,862$
4. $74,286+52,153=126,439$
5. $\quad 58,482+34,619=93,101$
6. $\quad 45,782+2845=48,627$
7. $28,341+5294=33,635$
8. $34,784+3997=38,781$ quicker to work out mentally
9. $\quad 72,458+8725=81,183$
10. $56,794+7537=64,331$

## Challenge

Write two additions with answers between 20,000 and 30,000 where there are no zeros or fives in any of the numbers!
e.g. $11,226+8393=19,619$

## Check your understanding Questions

Two numbers add together to equal 10,000.
One of the numbers is 2308.
What is the other number?

At the start of June, there were 4548 toy cars in the shop.
During December, 8728 more toy cars were delivered and 9473 toy cars were sold.
How many toy cars were left in the shop at the end of December?

Write the four missing digits to make this addition correct:
$\square 6 \square 8+3 \square 9 \square=9019$

Explain why it would be sensible to choose different methods to solve (a) and (b) below. Then solve both.
(a) $67,493+21,561$
(b) $50,005+9998$

Complete the addition by finding $\square, \div$ and $\triangle$ :
$12 \square 62$
+938 -
$2 \triangle 251$

## Check your understanding

## Answers

Two numbers add together to equal 10,000.
One of the numbers is 2308.
What is the other number? 7692

At the start of June, there were 4548 toy cars in the shop.
During December, 8728 more toy cars were delivered and 9473 toy cars were sold.
How many toy cars were left in the shop at the end of December? 3803

Write the four missing digits to make this addition correct:
$5628+3391=9019$

Explain why it would be sensible to choose different methods to solve (a) and (b) below. Then solve both.
(a) $67,493+21,56189,054$ best solved by column addition as there are lots of different digits in each number and several instances where 'carrying' will be needed.
(b) 50,005 +9998 60,003 can be solved mentally with supporting jottings, by adding 10,000 and then subtracting 2.
Complete the addition by finding $\square,+$ and $\left.\triangle: \quad \begin{array}{rll}12 & 8 & 6 \\ +\quad 9 & 3 & 8 \\ +1\end{array}\right)$
